

COCKROACH AFTERCARE INSTRUCTIONS

We have provided a comprehensive list of instructions for your aftercare. These guidelines are designed to help you eliminate any remaining pests and prevent re-infestation. If you come across any live cockroaches, it is crucial to take immediate action by vacuuming them up and disposing of the vacuum bag. If you continue to observe the presence of live bugs or experience ongoing issues, please contact us for further assistance.

Here are the detailed aftercare instructions:

1. **Daily Kitchen Maintenance:** Do dishes and clean all surfaces (stove, oven, counters etc.) where food or crumbs may be found daily to eliminate any food sources for cockroaches and other pests.
2. **Food Storage:** Seal all food in plastic, airtight containers. Make sure that there are no crumbs or spills inside cabinets, drawers or the refrigerator.
3. **Dirty dishes and other food items** should not be left in the living room, bedrooms, or other areas of the apartment.
4. **Clear Clutter:** Thoroughly remove clutter from all areas of your house, ensuring that nothing is left on the floor. By decluttering, you eliminate potential hiding spots for cockroaches.
5. **Daily Floor Maintenance:** Vacuum or sweep your floors every day, paying special attention to your kitchen, bathroom, and other areas where cockroaches are commonly found. Utilize vacuum attachments to clean along baseboards and underneath and around furniture.
6. **Cleaning Hard Surfaces:** Thoroughly scrub hard surfaces such as countertops, cabinets, tables, chairs, and other furniture. Pay close attention to corners, seams, and crevices where cockroaches may seek refuge.
7. **Laundry Management:** Use a clothes hamper for your dirty laundry instead of leaving it on the floor or in corners of closets. Roaches like to hide in piles of clothes.
